John Poister, the Pennsylvania Department of Environmental Protection's Southwest Regional spokesman, said officials with Rosebud Mining Co. confirmed that the MCHM, a coal-washing chemical used widely in the industry, was transported to its Dutch Run facility, near Elderton.

They have a complete spill and protection control plan in place. It is on file with us and must be updated annually. They have not had any leaks of any type or spills at that facility," he said, adding that Rosebud's plan is to store MCHM at Dutch Run in tanks with a capacity of "several thousand gallons."

Armstrong County Public Safety Director Randy Brozenick, the fire chief in South Buffalo, said he was not notified of the shipment of MCHM to any facilities inside the county.

Brozenick said first responders should know what types of chemicals could be present should they have to respond to an incident. Armstrong County does not have its own hazardous material response team. It contracts with McCutcheon Enterprises in Apollo for hazmat services.
